## STATUTORY GRAIN FREIGHT RATES

The Western Grain Transportation Act (WGTA) confers upon the National Transportation Agency (NTA) the authority, under Section 35, to prescribe the annual rate scale for the movement of western grain by rail on or before April 30th in respect of the next crop year. The purpose of this publication is to provide producers and other interested groups with information on Statutory grain freight rates from local delivery points to the West Coast ports of Vancouver and Prince Rupert, and to Thunder Bay.

The total Statutory rates will decrease by about 0.7 per cent during the 1988-89 crop year from the rates in the 1987-88 crop year. Producers' share of the Statutory rates would have increased by over 32 per cent over the rates in the 1987-88 crop year. But, in order to hold the producers' share of rates close to a reasonable level, the federal government decided to pay $35 million to the railways as part of the producers' share of the rate increase. This amount, an average of $1.11 per tonne, has been blended into the federal government's share of freight rate in order to maintain some uniformity between short and long distance shippers. When the federal contribution of $35 million is considered, the producers' share of rate increase during the 1988-89 crop year amounts to about 15 per cent.

The following is a brief description of the information contained in this publication.

- The publication shows the local shipping points alphabetically, the railway which serves the point, the mileage to port upon which the freight rate is based, the base rate scale, the total 1988-89 rail freight rate, the amount of rail freight to be paid by the Federal Government, the producer share under the WGTA, and the net rail rate to be paid by the producer.
- Competitive points are those delivery points served by both railways. Contiguous points are those delivery points which are close enough to another rail line that the grain could readily move to delivery points on either line. The freight rate from a competitive or contiguous delivery point is normally based on the lower mileage of the two railways.
- The West Coast port parity concept included in the Statutory rate was retained under the Western Grain Transportation Act. Under port parity, westbound freight rates from either Edmonton or Calgary to Vancouver or Prince Rupert are the same.
- The mileage base is the railway mileage block used to determine the freight rate. With the exception of differences resulting from competitive and contiguous delivery points or adjustments for West Coast port parity, the mileage used is the shortest mileage to port. The actual distance grain travels enroute to port may be greater than the mileage used for rate-setting purposes.

- The base rate scale is a schedule of distance-related rates determined in 25-mile increments. Essentially, the base rate scale is the old Crow rate with a number of anomalies removed. The base rate scale is distance related and, with the exception of competitive and contiguous delivery points, does not take any other factors into account.
- The total freight rate is the rate paid to the railways for each tonne shipped under the Western Grain Transportation Act. The total rate is determined annually by the National Transportation Agency. Applying the formulas prescribed in the Western Grain Transportation Act, the National Transportation Agency determines an annual rate multiple. The base rate scale is multiplied by this factor to determine the total freight rate from each shipping point to either the West Coast ports or Thunder Bay. The multiple for the 1988-89 crop year is 6.24, down from 6.28 for the 1987-88 crop year.
- The Federal Government share is the portion of the total freight rate paid by the Federal Government for each tonne shipped. The Federal Government's commitments are specified in the Western Grain Transportation Act and include the Crow Benefit, a share of future cost increases and any Government contributions triggered by the safety net provisions in the Act. In order to protect producers from the Statutory increase in western grain freight rates, the Federal Government will contribute an additional $35 million in the 1988-89 crop year.
- The WGTA producer share (rate paid by the producer) is the amount paid to ship grain from the local shipping point to port. This rate is the total freight rate less the Federal Government's share as determined by the formulas contained in the Western Grain Transportation Act. Under the Western Grain Transportation Act formulas, producers' share of the Statutory rates would have been 27.7 per cent and the Federal Government's share 72.3 per cent. However, the producer will not be paying the rate established under the Western Grain Transportation Act formulas during the 1988-89 crop year. These percentages (presented under net producer share) have changed because of the additional contribution of $35 million by the Government towards the producers' share of the rate increase.
- The net producer share is the portion of the total freight rate the producer pays during the 1988-89 crop year to ship grain from the local shipping point to port. This rate is the total freight rate less the Federal Government's share as determined by the formulas contained in the Western Grain Transportation Act and less the additional federal assistance for the 1988-89 crop year (an average of $1.11 per tonne or $35 million). Therefore, for the 1988-89 crop year, the producer pays 24 per cent of the total freight rate and the Federal Government pays the remaining 76 per cent.
